ECB in its latest policy meeting decided to leave the key rates unchanged, but for the 1<sup>st</sup> time incorporated the statement that it will loosen the policy once it gets clear indication of inflation nearing the 2% mark. This is the strongest rate cut signal given so far. In contrast, uncertainty around the timing of Fed's rate cut has again increased, as hotter than expected CPI print gave support to FOMC views (in the minutes) that more evidence is needed to see if the inflation is coming down on durable basis. Geopolitical tensions in the Middle East and its impact on oil prices was also highlighted as a concern. Further, dip in initial jobless claims to 211k for the week ending 6 Apr versus est.: 215k and 222k in the previous week, also reflect strength in the economy. However, as breather, US PPI has come in at 0.2% (Mar'24) versus est.: 0.3% and 0.6% in Feb'24.

- Global stocks ended mixed as investors' monitored key US inflation data with PPI rising at a slower pace than expected. The focus will now shift towards earnings report. Amongst other indices, FTSE dropped the most led by sharp losses in banking stocks. Sensex after trading to an all-time high, slipped and is trading lower today, while other Asian stocks are trading mixed.

- Global currencies ended mixed. DXY was largely unchanged and the recent PPI data has reinforced concerns of Fed delaying rate cut. According to the CME Fed watch tool, investors have priced in a 76% chance of no rate cut in Jun'24. JPY continues to depreciate, raising the possibility of government intervention. INR is trading weaker today, while Asian peers are trading mixed.

- Barring China (flat), India (closed), other major 10Y yields inched up. Higher than expected retail inflation in the US, FOMC minutes indicating more cautious approach of members against inflation, and lower than expected jobless claims, have reignited fears that Fed may not cut rates in Jun'24 also. Following global cues, India's 10Y yield has opened much higher today at 7.18%.
