Global markets turned buoyant after the US debt ceiling deal was tentatively struck with final voting expected this week (5<sup>th</sup> June timeline). However, some risk continue to loom as investors are concerned about the possible spending cuts might weigh in on growth. Furthermore, the entire process has also raised concerns over US standing with other credit rating agencies. Separately, markets will await China's PMI reading and rate decision by Bank of Thailand.

- The in-principle approval in the US debt ceiling deal has pushed global indices in to a relief rally. Nikkei climbed up by 1% (highest since Jul'90). Amidst the positive trend and boosted by strong FII inflows, Sensex reclaimed the crucial 63,000 mark led by strong gains in consumer durable and metal stocks. However, it opened lower today, while other Asian stocks are trading mixed.

- Except GBP (closed) and JPY (higher), other global currencies ended lower against the dollar. DXY ended flat, as risk-on sentiment, supported by US debt ceiling deal, was offset by increased probability of rate hike by Fed in Jun'23. INR depreciated by 0.1%, driven by demand for US\$ by OMCs. It is trading further lower today, in line with other Asian currencies.

- Global yields closed mixed. Barring US and UK (closed), yields in Germany and China fell, while they rose in Japan and India. Germany's weaker than expected GDP growth in Q1 continues to dampen investor sentiment. US debt ceiling deal

also allowed yields to come off their high. India's 10Y yield rose by 2bps, as oil prices inched up and analysts expect rate hike by Fed in Jun'23.
