### Macro developments

- India's manufacturing activity continued to remain robust as visible in the PMI reading. It rose to 56.4 in Dec'20 compared with 56.3 in Nov'20. This was led by marked improvement in business conditions across the sector. Input cost inflation on the other hand accelerated to a 26-month high in Dec'20. Employment scenario also weakened considerably.
- Global manufacturing activity showed marked improvement in Dec'20. Manufacturing PMI in Japan rose to 50 in Dec'20 (versus 49 in Nov'20) ending 19-months of contraction. Euro Zone's manufacturing PMI rose to a 31-month high at 55.2 versus 53.8 led by Germany. US manufacturing PMI also rose to a 6-year high at 57.1 from 56.7 led by expansion in output and new orders. UK's manufacturing PMI too rose to a 3-year high at 57.5 from 55.6 due to a surge in orders before end of Brexit transition period.
- Singapore's GDP contracted for the fourth straight quarter in Q4CY20 declining by 3.8%, however pace of decline was slower than Q3 at 5.6%. While manufacturing sector output expanded (up 7.1%), construction (down 33.7%) and services sector (down 7.8%) continued to contract. For CY20, GDP growth dipped to 5.8% versus 0.7% increase in CY19 and much sharper than the 2.2% decline during the Asian Financial Crisis.
