### Macro developments

- World Bank expects India's GDP growth to contract by 3.2% in FY21 as lockdown measures to curtail COVID-19 derail economic activity. Further, weakness in global economy and stress in the financial sector will also have a dampening effect on growth with a possible recovery in FY22 (3.1%). It also expects global GDP to contract by 5.2% in CY20 - the deepest contraction since WWII. Further, almost 90% of the world economies are expected to experience a recession.
- Germany's industrial production fell by 18% in Apr'20 (est.: 16.5% drop) against 9.2% decline in Mar'20. This was the biggest plunge since CY91, led by sharp fall in capital goods (3.5% decline in Apr'20). German's central bank forecasts suggest economy would contract sharply by 6% in CY20. Some stimulus worth € 130bn is anticipated to boost growth.
- Japan's GDP in Q1CY20 contracted by 2.2%, less than previously estimated (3.4%) and up from 7.2% dip in Q4CY19. The upward revision was driven by private non-residential investment, revised from a decline of 2.1% to increase of 8%. Private consumption, and exports continued to contribute negatively. In Q2CY20, GDP is estimated to contract by over 20% led by private investment and consumption.
