## Gradual recovery on the cards

**While manufacturing and services PMIs picked up further in Dec'19, decelerating railway freight and credit growth, lacklustre non-oil-non-gold imports and dip in government spending imply that broader economic activity is muted. Given the pressure on tax revenues and government restricting its fiscal deficit, we do not see government spending picking up. Privatisation will drive private sector capex in the country next year and give room to government to spend on infra sector.**

**Consumption remains subdued:** Non-oil-non-gold imports edged lower in Nov'19. Consumer durables output declined to an all time low of (-) 18%. However, there seems to be some improvement in passenger car sales in Dec'19 after a (-) 10.8% decline seen in Nov'19. With RBI's consumer confidence index at a 5-year low, consumption revival will be gradual.

**Government spending cools off:** General government spending is easing. On FYTD basis, expenditure growth softened to 10.2% in Nov'19 from a 11.1% in Sep'19. Centre's revenue spending has eased to 13% (14% in Sep'19). Revenue expenditure of states has fallen to 8.8% (9.4% in Sep'19). Centre's capex has dipped to 11.7% (15.3% in Sep'19) and capex by states remains muted at 1.2% (-1.3% in Sep'19). The cut in spending is on the back of revenue shortfall. States have resorted to higher

borrowing to sustain spending. In Apr-Dec'19 states have borrowed Rs 3.7tn, 30.5% higher than last year.

**Growth outlook is muted:** We expect GDP to be lower at 5% in FY20 and gradually revive to 5.7% in FY21. The gradual recovery will be led by transmission of past rate cuts, expansion of global demand, government's privatisation roadmap, infra pipeline and improvement in credit cycle.

**Inflation and rates:** Inflation is likely to exhibit a sharp upturn in Dec'19 (6.6%) & Q4FY20 (5.9%) before decelerating. Another overhang on interest rates on government securities is the fear of higher fiscal deficit, given muted government revenues. Yields fell by 2bps in Jan'20 after RBI announced 'operation twist'. Given lacklustre revenue collections, states will borrow even higher amount next year and RBI can cut rates only in H2FY21. Thus yields are likely to remain firm for now.

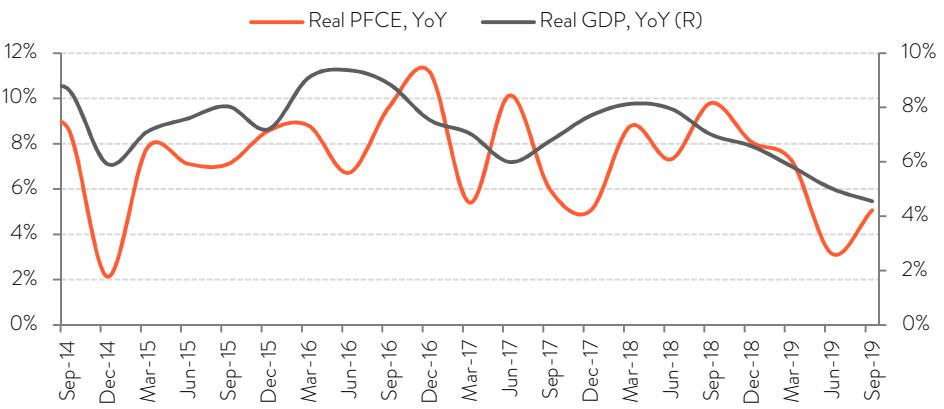

**Higher oil prices to put pressure on INR:** Despite higher oil prices and subdued FII inflows, INR rose by 0.5% in Dec'19 after falling by (-) 1.1% in Nov'19. INR gained in-line with other EM currencies (up by 2.1% in Dec'19) as risk sentiment improved due to ebbing US-China trade tensions. However, flaring up of geo-political tensions in the Middle East and the resulting volatility in oil prices remains a key risk to INR .
