## India's recovery hit by second wave

Our economic activity tracker shows that economy is now 21% below Feb'20 baseline compared with a 3% dip in Mar'21. A number of high frequency indicators—E-way bills, toll collections, vehicle registration, rail freight and mobility—are showing impact on the economy. This makes us believe that there is a heightened risk to our growth forecast of 11% for FY22. Given the change in economic outlook, yields for government and private sector have eased again. The outlook on yields looks more benign than in Mar'21. After a depreciation of 0.3% in Apr'21, INR has again regained some ground. We expect it to trade in a tight range of 73-75/USD. Merchandise and services exports are likely to do well in a background of improving global demand. However, rising oil prices and change in monetary policy stance of global central banks is a risk to our yield and INR view.

**State specific restrictions to impact growth:** Second wave has hit India hard with 6.6mn fresh cases in Apr'21 compared with 1.1mn new infections in Mar'21. Our activity tracker shows that economic activity is almost 21% below Feb'20 baseline from 3% below baseline in Mar'21. We expect state specific restrictions to continue in Q1FY22 and spillover into Q2FY22 as well. This puts our FY22 growth estimate of 11% at risk.

**High frequency indicators show a dip:** High frequency indicators such as diesel sales (-13.5% MoM), vehicle registration (-18.2% MoM), rail freight (-9.9% MoM), toll collections (-15% MoM) and E-way bills (-

7.1% MoM) are pointing to a dip in economic activity. While internal trade seems to have been hit as seen in toll collection and E way bills, external trade did hold ground in Apr'21. With restrictions across most states in India, non-oil-non-gold imports will lag.

**Yields softened:** India's 10Y yield fell by 14bps in Apr'21 and has fallen by another 2bps in May'21. Muted credit demand outlook on the back of rising Covid-19 infections explains this. Also RBI is likely to maintain accommodative monetary policy stance for longer than what was expected a few weeks back. The G-Sec Acquisition Program (GSAP-1) will also help in ensuring that yields remain on the lower side. The risk to yields is likely to come from rising oil prices and change in monetary policy of advanced economies. As global economy normalises, oil prices are unlikely to see a downtick. Same is the case with commodity prices. In addition, central banks of England and Canada have reduced their asset purchase program in light of improving economic activity.

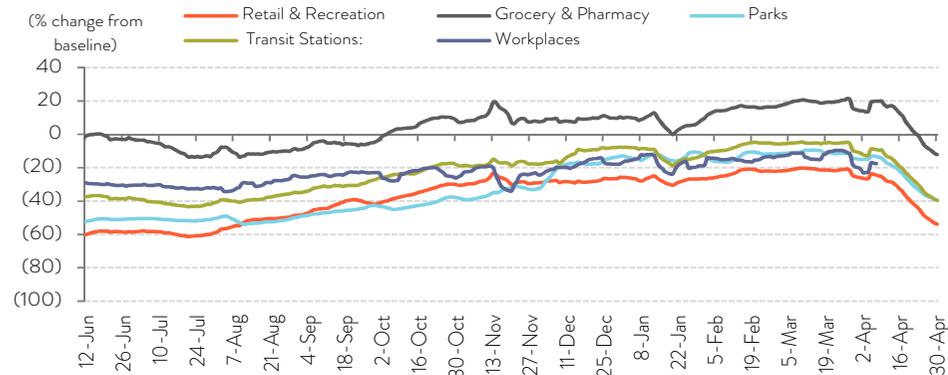

**INR to remain range-bound:** INR depreciated by 0.3% in Apr'21 as Covid-19 cases spiked sharply. FII flows turned negative for the first time in 7-months at US\$ 1.9bn. However, INR has risen in May'21 supported by a weakness in USD (DXY has fallen by 1.2% in May'21). We expect INR to trade in the range of 73-75/USD in FY22. Higher oil prices and further spike in Covid-19 cases remain a key risk to our view.
